

75%

Up to 75% of new diseases affecting people over the past 10 years have originated from animals or animal products

200+

Currently there are over 200 identified zoonotic diseases that represent a clear threat to our health and the welfare of animals

20%

Up to 20% of global animal production is lost to disease

315K

In the EU, around 315,000 human cases of food-borne zoonoses are reported each year

Some zoonotic diseases such as rabies can be eradicated thanks to animal medicines

The use of vaccines and animal medicines play an increasingly important role in disease control around the world

Preventing disease in animals protects our health. The animal medicines industry is actively working with governments and regulators in the EU and around the world to ensure that animal medicines can be made available where they are needed
